Maps, instruments, and rooms for other kinds of minds

Fourteen images from six works, 2018 to 2026: a participatory atlas of neurodiversity, immersive environments for contemplative states, two instruments driven by quantum randomness, a ceremony of encounter, and a community for neurodivergent creators.

All works: concept, design, and development by Daniel Rezinovsky unless stated.
Live links are given on each page.

New Kinds of Minds: A Global Atlas of Neurodiversity

2026, ongoing · participatory digital cartography, open dataset · new-kinds-of-minds-hub.vercel.app

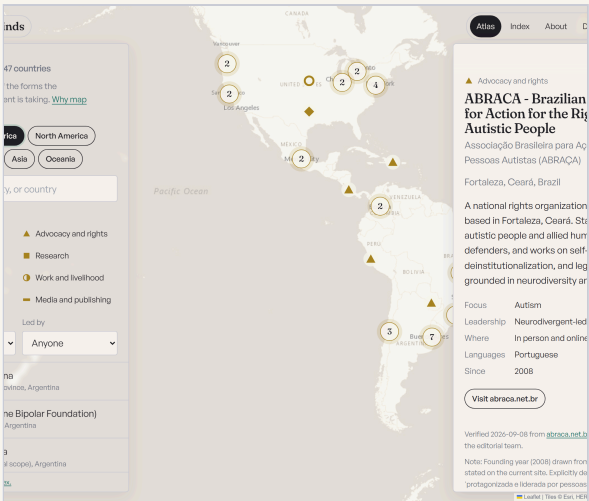

A living map of the organizations, collectives, artistic practices, research groups, and peer communities through which societies are learning to recognize different kinds of minds. Each entry is verified against its source and classified by kind, focus, and leadership; each kind of initiative is drawn with its own mark, so a region reads as a pattern of forms. First public release: 445 initiatives in 87 countries, an index, permanent entry pages, a public contribution form, and the dataset under an open license.

The work proposed to the Foundation is Phase I of this atlas: a year of mapping Latin America in Portuguese and Spanish with neurodivergent collaborators.

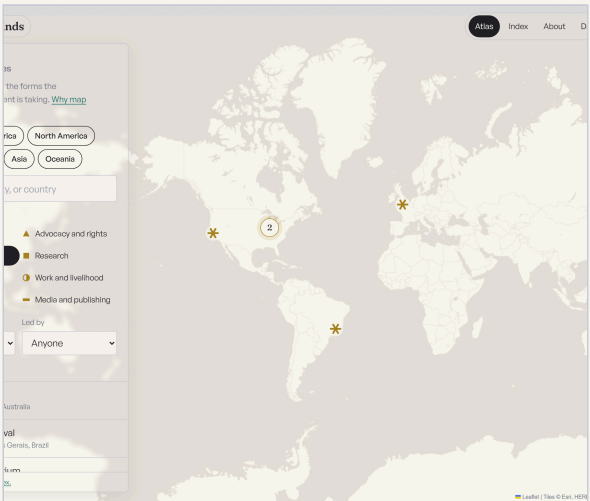

Role: concept, research method, taxonomy, visual system, development, editorial verification of the first 445 entries.

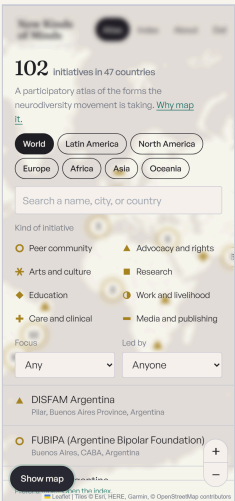

1 **World view.** Eight marks for eight kinds of initiative; clusters open on approach.

2 **An entry open.** ABRAÇA, Fortaleza: leadership, focus, languages, source, and verification date.

3 **Filtered to arts and culture.** The same map read as one kind of activity.

4 **On a phone.** The list view, with the map one tap away.

About, index, and data pages

The map is one view. Everything on it is also a sortable table and a permanent page, because a neurodiversity project cannot make the map the only way in. The About page is the manifesto: why map this movement, why geography matters, how records are made, and where the categories fail. The Data page publishes the schema, the taxonomy with its known problems, and the whole dataset for download.

Role: writing, information architecture, accessibility design.

A map of how people are learning to recognize other kinds of minds

Someone in Fortaleza there is a collective of autistic adults who write their own manifesto. In Urakawa, on the coast of Hokkaido, people discharged from a psychiatric ward have spent forty years studying their own hallucinations together and publishing the results. In Montevideo a small association meets in a borrowed room. None of these places know about each other.

This is the problem this atlas starts from. The neurodiversity movement, if it is one movement at all, is dispersed across countries, diagnoses, disciplines, and languages. An autistic-led network in Chile, a dyslexia foundation in Lisbon, a hearing voices group in Rio de Janeiro, a neurodivergent theatre company in Melbourne and a research lab in Portland are all working on a version of the same question: what happens when a society stops treating a way of thinking as a deficit and starts treating it as a difference. They rarely appear in the same list. Most of them are invisible beyond their own city, or their own language, or their own diagnostic label.

I am a psychologist. For twelve years I sat with people whose minds did not fit the categories I had been trained to apply to people, and I slowly stopped believing that the categories were the interesting part. The interesting part was what people built around the differences: the groups, the vocabularies, the arguments with their doctors, the festivals, the small institutions that appear when enough people refuse to be alone with a diagnosis. Those things have addresses. They can be mapped. Once mapped, they can be compared.

Why geography

The word neurodiversity is usually traced to the Australian sociologist Judy Singer, writing in the late 1990s, and to the autistic self-advocacy communities that took it up online. The idea travelled, but it did not travel evenly, in some places it arrived as a political claim about rights, in others it stayed inside the clinic and became a gender word for the same diagnoses. In Brazil it met a much older movement, the *Luta Antimanicomial*, which had been closing asylums since the 1960s under the influence of Franco Basaglia, and the two vocabularies met each other in a place the founders of *Fora da Caixa* coined *fora da caixa*, research by the people concerned, before anyone there was saying neurodiversity at all.

5 About. The argument for the map, and a list of the ways its categories are provisional.

New Minds of Minds

A Book Inks About Data Add it on GitHub

The dataset

Everything on the map is a row in a file you can download, cite, and correct. Version 0.1.0, regenerated 2026-09-08.

[Download JSON](#)

[Download CSV](#)

[Browse on GitHub](#)

The data is published under [CC BY 4.0](#); use it for anything, credit New Minds of Minds. The code is MIT. Every record carries the page it was verified against and the date, so a reader can check the claim rather than trust the map.

How a record is built

A record is one initiative: a name, a place, a one-paragraph description written in plain terms, and a small set of classifications. Three of those classifications do most of the analytical work.

Kind is the initiative's main activity. Eight values, each drawn with its own mark on the map, so that a region can be read at a glance as a pattern of shapes rather than a rainbow of dots.

📍 Place community

Neighborhood by town for neurodivergent people

✳️ Arts and culture

Collections, studios, theaters, festivals

🎓 Education

Schools, learning projects, training

🏠 Care and clinical

Therapies and health services

⚡ Advocacy and rights

Political, legal, occupational, work

💼 Research

Early, social, interdisciplinary

👥 Work and livelihood

Employment, cooperatives, enterprise

📄 Media and publishing

Magazines, podcasts, archives

Leadership records where the initiator describes itself as such by neurodivergent people, by families or professionals, or by none. This is the fruit of the movement itself argues about most, and the sites will not guess the value is `unknown`, unless the initiative says so.

Focus lists the forms of neurodivergence the initiative names. The list includes autism, ADHD, dyslexia, and other familiar categories, and also Mad Pride, psychiatric survivor, and hearing-voice movements, which share the neurodiversity argument even where they refuse the word. The [About page](#) says why the list is provisory.

Fields

ID	Initiative name, initials, acronym
name	any word used unambiguously
name_lang	name in the initiative's own language, or null
summary	up to five phrases, maximum, up to 500 characters
Type	category community school research education work arts media
Focus	List of focus tags, see new-data/mind-focus
Leadership	id kind leader topic website
kind	education employment healthcare politics research work arts media
leader	URL linked to profile
website	country city region
lat	WGS84 coordinates of the city
lon	WGS84

Ontik

2025 to 2026 · WebXR environments, Three.js and GLSL ·
ontik.app

Immersive environments for contemplative and non-ordinary states, playable in a VR headset or a browser: a nine-minute experience and five shorter portals, each a shader-built world with spatial sound. Ontik grew out of clinical work with people who had lived through spontaneous altered states and had no place to put them; the environments are attempts to build such places. The project's research side invites feedback from people with direct experience of mystical, psychedelic, or anomalous states.

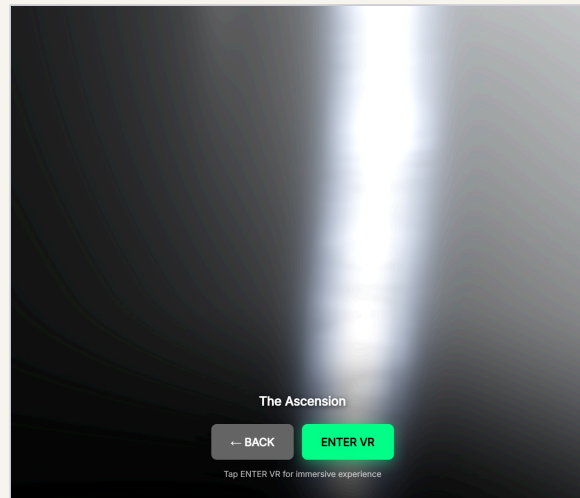

Role: concept, shader and environment design, sound design, development. Sole author.

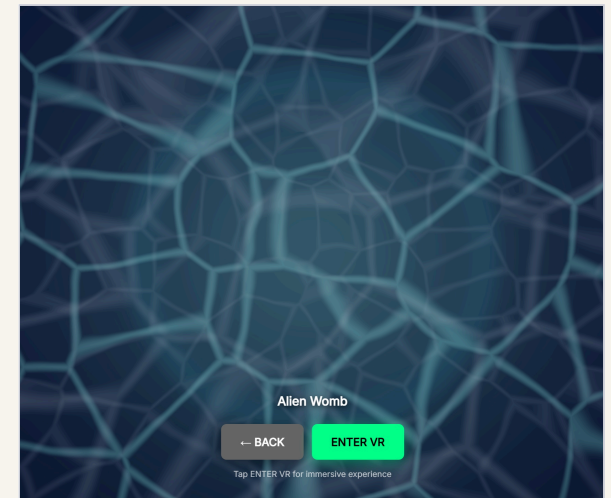

7 Portal menu. Six environments, entered from a browser or in VR.

8 The Cosmic Attractor. Luminous bodies drawn toward a kernel of spacetime.

9 The Ascension. Streams of light after Bill Viola.

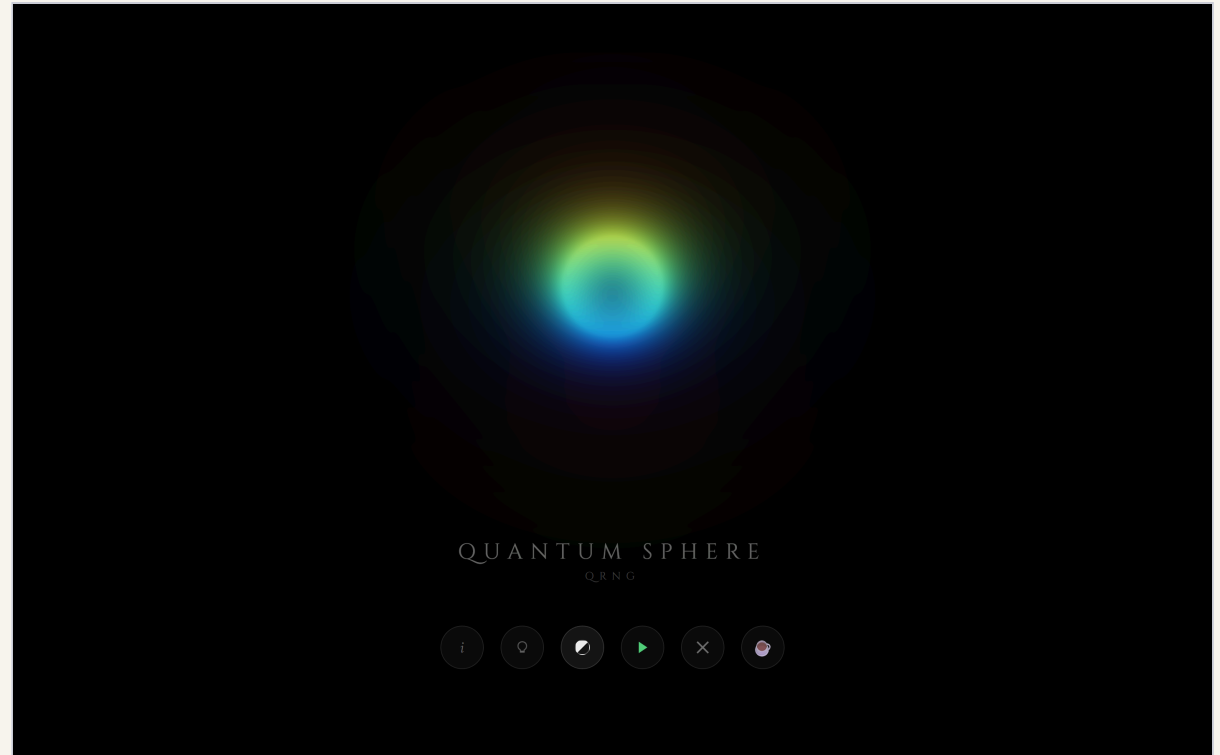

10 Alien Womb. An organic intelligence that reaches for the visitor.

Quantum Sphere

2026 · real-time generative work driven by hardware quantum randomness · mindlamp.monkadelic.me

A raymarched sphere that breathes at rest and changes size and color with a live stream of quantum random numbers from a photon-detection device in a German laboratory. The piece computes a running statistic against the protocol of the Princeton Engineering Anomalies Research lab and visibly shifts state when the stream departs from chance, so that a viewer can sit with the oldest question in parapsychology, whether attention touches matter, as an image rather than a table. Each session is logged.

Role: concept, shader adaptation, statistics, development.

11 Quantum Sphere at rest. The sphere's hue and radius follow the quantum stream second by second.

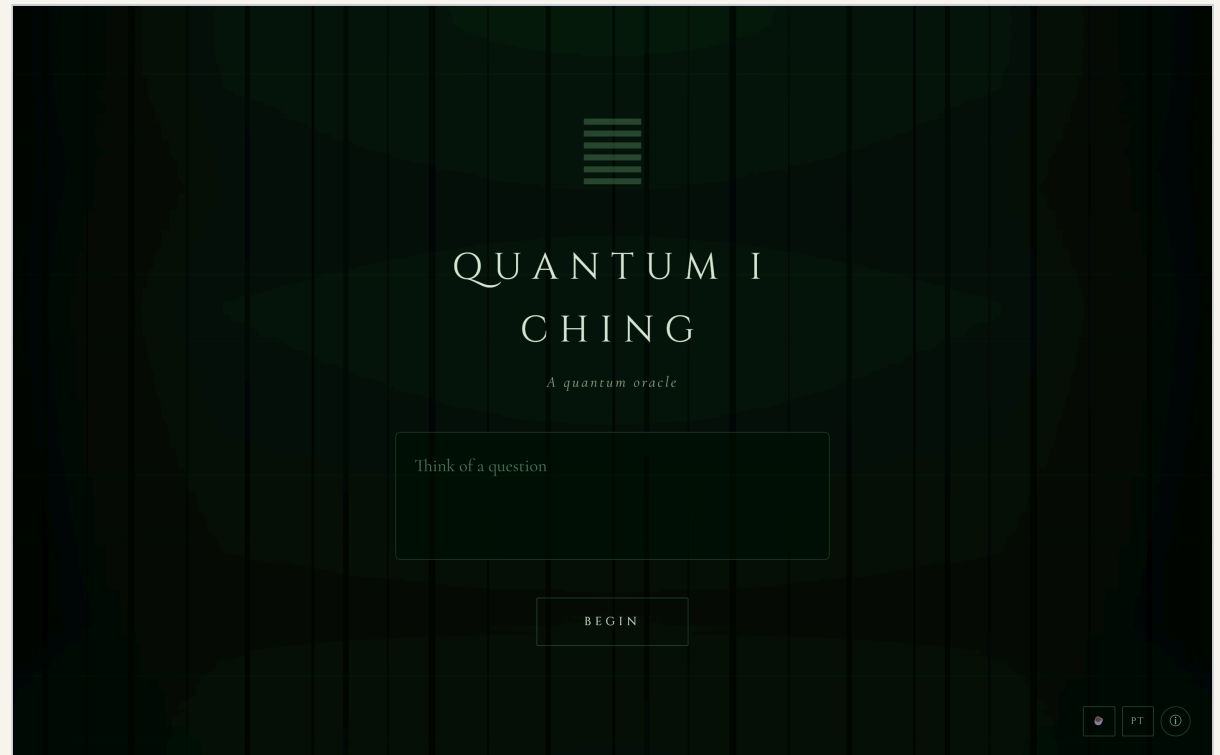

Quantum I Ching

2026 · divination instrument, English and Portuguese ·

iching.monkadelic.me

An I Ching that casts each line from three bits of hardware quantum randomness and reads the resulting hexagram through Richard Wilhelm's translation with a language model as reader. It is a small work about an old question, whether a random process can carry meaning, built so that the randomness is at least genuinely physical. The Portuguese edition brought the sixty-four hexagrams into Brazilian Portuguese.

Role: concept, interface, development, Portuguese edition.

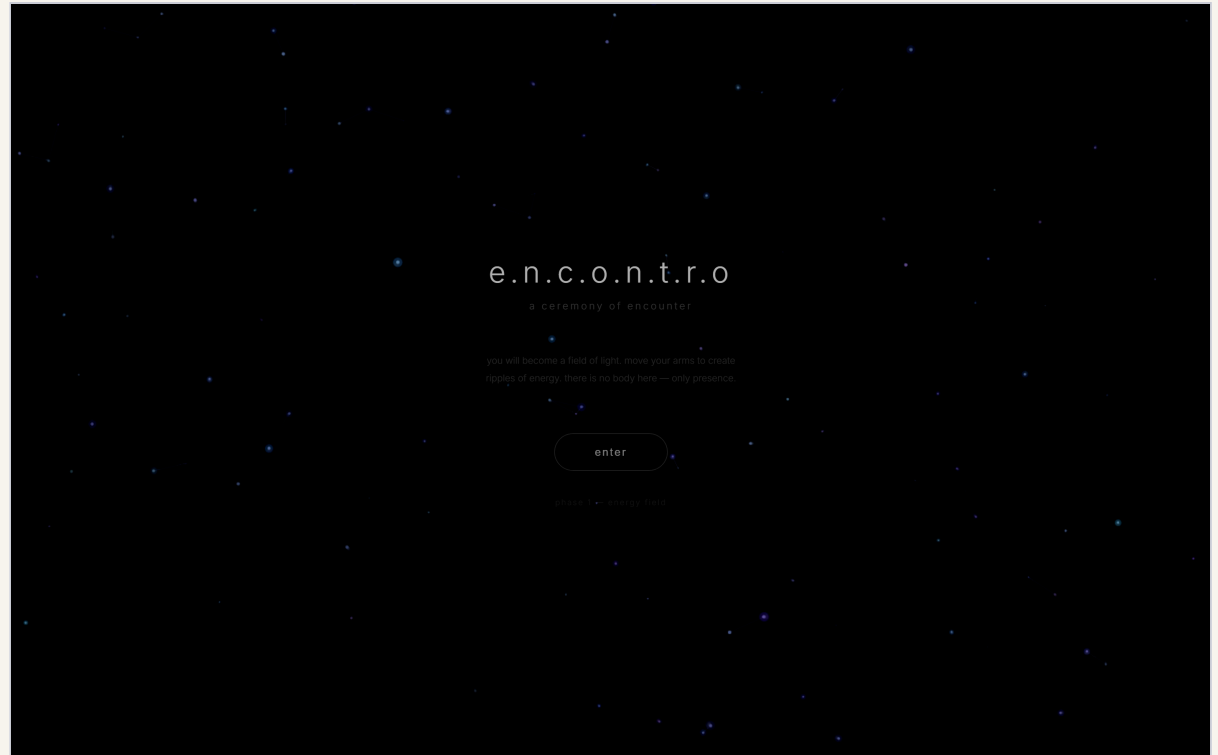

12 Quantum I Ching. The first screen: a question, then six casts.

Encontro

2026, in development · WebXR ceremony of encounter · danrezi-gif.github.io/encontro

A place to meet without a body. The visitor becomes a field of iridescent light that ripples with hand movement, contracts in stillness, and scatters when moved too fast. There are no avatars, names, or profiles. The first phase, presence, is public; the next phases, other fields and networked encounter between several people, are the reason the work exists and are being built. Encontro is the closest ancestor of the atlas: both are about what happens when minds that are usually alone find each other.

Role: concept, shader design, development.

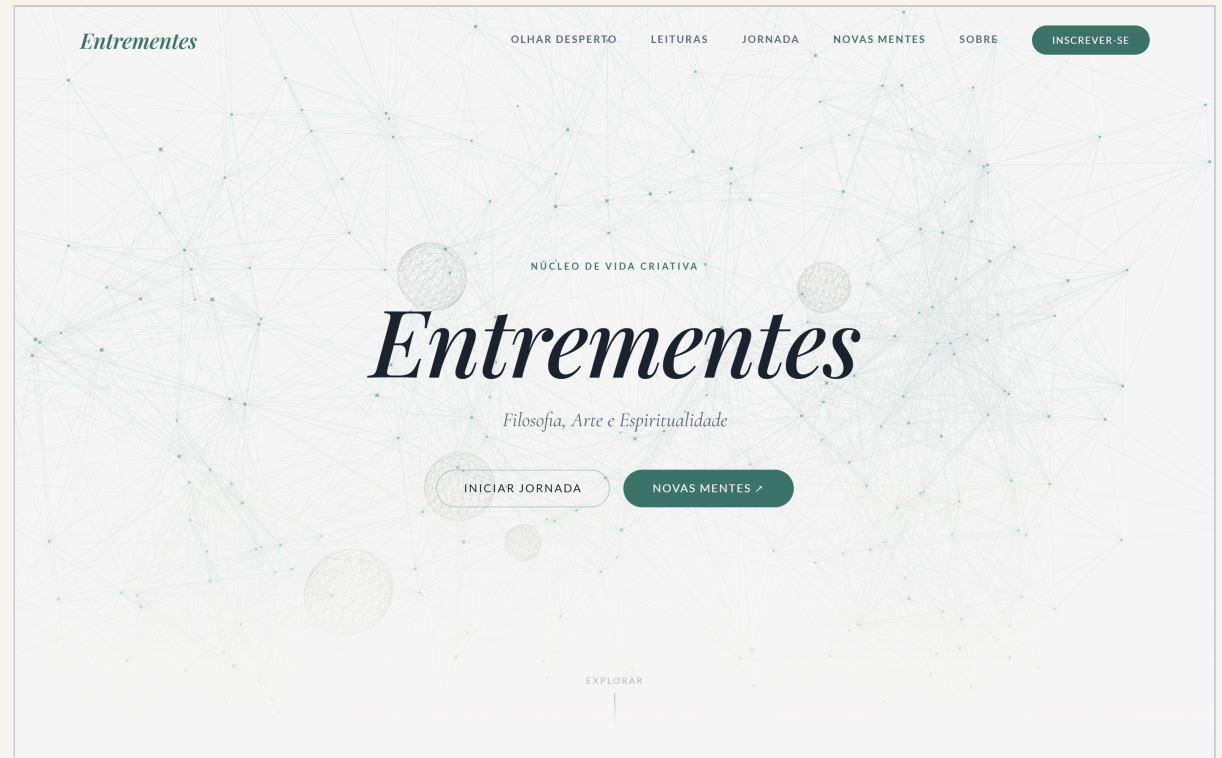

13 Encontro, threshold. "You will become a field of light."

Entrementes

2026, forming · bilingual project and community for neurodivergent people, artists, and therapists in Brazil · danrezi-gif.github.io/Entrementes

Entrementes is the community from which the atlas grew: a Portuguese and English project bringing together neurodivergent people, creative practitioners, and therapists around a view of neurodivergence as cognitive variation rather than deficit. Its first public forms are a media channel, a reading program, a workshop series on AI as a cognitive tool for neurodivergent creators, and the "Novas Mentes" program, which draws on my 2022 thesis on spiritual awakening. New Kinds of Minds is its first public instrument.

Role: founder, writer, developer.

14 Entrementes. "Núcleo de vida criativa: filosofia, arte e espiritualidade."

Writing and research

2017 to 2023 · book, chapter, articles, thesis

Encontro com o Absoluto: uma jornada além das fronteiras da consciência (Coffeers, 2018) is a philosophical and contemplative account of the encounter between human consciousness and the ground of being, written from a spontaneous awakening I had at twenty-six. The MA thesis *Transições Ontológicas* (PUC-SP, 2022) examined spiritual awakening through phenomenology, philosophy of mind, and contemplative traditions, and was supported by a 2020 John Templeton Foundation grant in the Cognitive Psychology of Religion in Brazil program.

As a co-author I worked on the Brazilian Portuguese validation of the Mystical Experience Questionnaire (MEQ30) and the States of Consciousness Questionnaire (*Archives of Clinical Psychiatry*, 2017), and on a study of social support among people reporting mediumship experiences (*International Journal of Latin American Religions*, 2023). A book chapter on the philosophical dimensions of spiritual awakening for health professionals appeared in 2021.

Relevance: the atlas's verification discipline and its treatment of categories as historically contingent come from this research background, as does the habit of naming sources.

Where these works meet

Every piece here is a room or an instrument for a kind of mind that usually has nowhere to go: a contemplative state, an anomalous experience, a question put to randomness, a body that wants to meet without a body, a neurodivergent adult looking for others. The atlas is the same gesture at the scale of a movement. It draws the rooms that already exist, all over the world, and lets the people in them see each other.

Monkadelic (monkadelic.me) is the umbrella under which the immersive and generative works are published; danielrezinovsky.com holds the research and clinical side.
